

# The Implementation Plan of Denmark (1997 - 2000) for AMAP Phase II

*AMAP Phase II sampling stations in Greenland*

Prepared Oct. 99 by the Arctic Environmental Secretariat for presentation to the AMAP ASG and the AMAP WG-13 Meetings.

# **The Implementation Plan of Denmark (1997 - 2000) for AMAP Phase II**

## **Implementation Plan 1997-2000**

The core of the Danish implementation of AMAP Phase II in Greenland and the Faroe Islands is a number of AMAP projects funded by the Danish Environmental Protection Agency under the Dancea programme (Danish Cooperation for Environment in the Arctic).

Since 1997 one-year projects explicitly designed to implement AMAP Phase II have been initiated by Dancea each year. Dancea projects are funded one fiscal year at the time, thus only projects initiated in the period 1997-2000 are summarised in this plan. However, the Danish Implementation Plan for AMAP Phase II is expected to be expanded once a year from 2001 to include new projects funded by the Danish EPA.

In addition to the Dancea financed core projects summarised in this document a number of other AMAP-relevant projects are running in Greenland. As soon as the total AMAP-programme for Phase II has been finalised and the AMAP Project Directory is ready, it is our intention to include information on relevant supplementary projects in the Project Directory.

## **The Trend Monitoring Programme**

The implementation plan of Denmark for the trend monitoring components of AMAP Phase II in Greenland and the Faroe Islands is the core work of Denmark for AMAP in 1997 - 2000.

Based on the results from AMAP's first assessment the implementation of AMAP Phase II in Greenland will in particular give priority to monitoring of POPs and Heavy Metals under the Marine Programme and the Human Health Programme, as well as traditional Greenlandic articles of food. Important parameters from the terrestrial, freshwater and atmospheric environment are included, too.

The following sections of this document contain

Annex 1: A number of tables which provide a total overview of species, pollutants etc., monitored in the trend programme in Greenland by Dancea financed projects.

Annex 2: A number of tables which provide a total overview of species, pollutants etc., monitored in the trend programme the Faroe Islands by the Dancea financed projects. The implementation of the Human Health Programme on the Faroe Islands has not been included in the tables yet, but will be later this year. The

Human Health Programme on the Faroe Islands is expected to be similar to that of the Human Health Programme in Greenland.

Annex 3: A number of tables which provide an overview of species, pollutants etc. monitored in the trend programme at the various sampling stations in Greenland by the Dancea financed projects.

Annex 4: A list of the POPs that are analysed for unless otherwise mentioned in the tables.

Annex 5: A list of the «Municipality Codes» used in the tables from Greenland.

## **Modelling, pathways and sources**

Denmark will continue the development of a hemispherical transport model. The final outcome is a module system, capable of describing quantitatively the transport processes and pathways to the Arctic. The model will quantify the chemical transformations en route and the atmospheric deposition, wet or dry, of a number of environmentally important pollutants such as sulphur and nitrogen oxides, a number of toxic and bio-accumulating heavy metals, including Cu, Zn, Cd, Pb and Hg, as well as the radiatively important ozone. The model system will constitute a tool for understanding the atmospheric transport mechanisms and for identifying the source areas and atmospheric pathways.

## **The Effect Monitoring Programme**

It is expected that the Human Health effect programme on biomarkers will be implemented in Greenland, when adopted by the AMAP WG.

Well defined birth cohorts in Greenland and the Faroe Islands are being established. These will form the basis for possible supplementary follow-up studies on the health situation of children, including studies on the relationship between neurological/psychological effects and contaminant levels.

In East Greenland a project will look for effects on Polar Bear in relation to mercury and POP levels. Another project have been looking for effects on kidney and skeleton in Narwhal and Seal due to high cadmium levels.

The core of the Danish input to the Climate Effect Programme will be the «Zackenberg Basis Programme». The Programme will provide long term monitoring data on biotic and abiotic environmental- and climate parameters from a terrestrial ecosystem in Northeast Greenland. Another project provides data on effects of UV-B radiation on bacteria, phytoplankton and microzoo-plankton in a marine environment in West Greenland.

In addition to the above mentioned Dancea financed projects a number of already ongoing supplementary projects in Greenland will be included in AMAP's Project Directory.

### **AMAP Human Health Thematic Data Centre**

Denmark intends to run the AMAP Human Health Thematic Data Centre in Phase II and cover the associated costs.

### **Assessment**

Denmark will provide Lead Country expertise for the Human Health assessment work, and will - if requested by AMAP - consider to provide Key National Experts and Designated Experts to the drafting groups of other assessment reports.

As was the case in AMAP Phase I Denmark will probably prepare National Assessment Reports based on the monitoring data from Greenland and the Faroe Islands.

### **Data Reporting System**

The Main contractors in the Danish Implementation Plan are:

- the National Environmental Research Institute
- University of Aarhus
- Risø National Laboratory
- National Institute of Public Health
- Food and Environmental Agency - Faroe Islands
- University of the Faroe Islands.

All data from projects in the Danish Implementation Plan will be reported to relevant AMAP Thematic Data Centres by the contractors. Contact between the scientists involved and AMAP, ASG and the TDCs can either be established directly between the parties or via Henrik Elling, the Arctic Environmental Secretariat, who will continue as «National Data Manager» in phase II.

## **Annex 1**

## Human Health, Greenland

### POPs

## **Annex 5**

## **Municipality Numbers used in the tables from Greenland**

- 1 Nanortalik
- 2 Qaqortoq, (Julianehåb)
- 3 Narsaq
- 4 Ivittuut
- 5 Paamiut, (Frederikshåb)
- 6 Nuuk, (Godthåb)
- 7 Maniitsoq, (Sukkertoppen)
- 8 Sisimiut, (Holsteinsborg)
- 9 Kangaatsiaq
- 10 Aasiaat, (Egedesminde)
- 11 Qasigiannguit, (Christianshåb)
- 12 Ilulissat, (Jakobshavn)
- 13 Qeqertarsuaq, (Godhavn)
- 14 Uummannaq
- 15 Upernivik
- 16 Qaanaaq, (Thule)
- 17 Ammassalik
- 18 Ittoqqortoormiit, (Scoresbysund)
- 19 North East Greenland National Park, south of Danmarkshavn
- 20 North East Greenland National Park, north of Danmarkshavn
