

ERRATA

In the published (printed) version of the *AMAP Assessment 2015: Methane as an Arctic climate forcer* publication the following error has been noted:

Text in the first column on page 55 states that:

... Nordic countries the entire technical abatement potential in 2030 is estimated at 4 Tg CH₄, ...

should read:

... Nordic countries the entire technical abatement potential in 2030 is estimated at 0.17 Tg CH₄, ...

Note: The electronic (PDF) version of this report that is posted on the AMAP website on the following link:

<http://www.amap.no/documents/doc/amap-assessment-2015-methane-as-an-arctic-climate-forcer/1285>

has been updated to incorporate this correction.

NB: 0.17 Tg CH₄ equals approximately 4 Tg (4 million t) CO₂-equivalents.
