Table 8-A4. ^{137}Cs activity concentrations (Bq/kg) in food products consumed by the average population in northern Canada and by the selected group.

Diet	<1960	1960-1964	1965-1969	1970-1975	1975-1979	1980-1984	1985-1989	1990-1994
<i>Imported products</i>								
Milk and milk products								
Meat								
Cereals								
Fruit and vegetables								
<i>Local products</i>								
Large land mammals	625	1250*	1250*	800	650*	450	230*	150*
Fish (fresh)	2	4	5	3	3	2**	2	1.5
Plants								
Small game								
Marine mammals	5	10	7*	6	5	3.7*	3.5	3.4*
Water	0.002	0.004	0.005	0.004	0.0-02*	0.002	0.001	0.001

The intake of ^{137}Cs with northern Canadian diet is dominated by the consumption of large land mammals, hence contributions from other diet components have been neglected.

* Values derived from compilation of Canadian Arctic data (Walton 1995). Other values interpolated.

** ^{137}Cs concentration in fish based on an assumption of an arbitrary mixture of fish of freshwater and marine origin at contemporary levels of ^{137}Cs concentration. Medium levels of ^{137}Cs in freshwater fish (3 Bq/kg) and in marine fish (1 Bq/kg) (Walton 1995).
